

in Winnipeg for sake of my chronometer which is very un-
able fluctuating much with the temperature. In Winnipeg
I can compare it daily & hourly with the clock which I put into
the basement of the Observatory to keep it at my own temper-
ature. — That it is most desirable to put in Prince Albert
this open I know & am only too anxious to do it, but in
astronomic work where it is the "hairbreadths" that we want to
determine it is most unwise to sacrifice quality for quantity.
We can not observe for personal equation when our body is chil-
dren & housewife, besides my chronometer will go to the "devil"
in rate then. A flat can have a Survey made but
no flat can have good astronomic work done at an
unpropitious time. — This wholly agrees in my views
and wired me so. —

Saturday 8
fine

Buz Computing. In the afternoon I had a visit from
Pete Dauphin who is in charge of the R.C. mission here,
In the evening I had a visit from Rev. J. Taylor & Mr. Angus
McKay H.B.C. I took them into the observatory & showed them
my instruments also transit of several stars.

- The night was unfavorable for work, in my first set of stars
I missed one thin cloud, then came the exchange of signals
with Winnipeg which were very good, but the second set of
stars I failed getting, the sky being completely overcast.

Sunday 9
little rain
cool
cloudy

Mr. Macana & I had dinner at Mr. G. L. Stevens, where
were also Mr. Clarkhill of Battleford, Rev. Taylor &
Mr. A. McKay H.B.C. of Fort Pitt. — Yesterday the in-
dians assembled at the agency for a pow-wow, but
Mr. Mann sent for Sergeant Hall A.W.M.P. who
paraded with revolver buckles to his belt up & down be-
fore them, when they dispersed. It is forbidden for the
indians to gather at the agency for any pow-wow, and the
indians know it. — One must be firm with the Indians & they
must know that law is ever supreme. —

- Observed and got my first set but when the time for ex-
change of signals came I found that the line was grounded
